ScalES-PPM - Bug #350

pkg-config file libraries results in overlinking

08/13/2020 08:32 PM - Matthew Krupcale

Target version:				

Description

The scales-ppm{,-core}.pc.in pkg-config files specifies several libraries in the Libs: portion which are actually internal, private library dependencies of scales-ppm. That is, they are not part of the public interface/API and are just implementation details. These should be specified instead in Libs.private: so that they are only added to the link when creating a static library.

Similarly, the MPI includes are part of the public scales-ppm-core API, so we need to include those, but we don't need parmetis or metis includes here (in any case, they should have been in scales-ppm.pc.in, not scales-ppm-core.pc.in, but they're not needed there either since they're again not part of the public API).

See attached patch and [1-2] for how libraries should be specified for linking.
